

ROHIT RAUT

Software Engineer, Python, Django, React Native, AWS

+91-7769977012 | rohit.raut2612@gmail.com | GitHub | LinkedIn | rohitraut.vercel.app | Pune, Maharashtra

SUMMARY

Full Stack Engineer with 1.5 years of experience across mobile and backend development. Built and shipped a **sports tech platform** end to end using React Native and Django, now live on both the App Store and Play Store. Comfortable owning a feature from database design through to release. Have worked with AWS (S3, EC2, Lambda), Docker, CI/CD, and integrated OpenAI APIs into production. Looking for a full time role in Pune or remote.

PROFESSIONAL EXPERIENCE

Software Engineer

Apr 2025 to May 2026

Agnotic Technology, Pune (Sports Tech Startup)

- Built a sports and self improvement mobile app from scratch, now live on the App Store and Play Store, using React Native on the frontend and Django on the backend.
- Brought app load time down from around 2s to under 1s by working through rendering bottlenecks, adding React Query caching, and cleaning up unnecessary API calls, which also cut total requests by about 30 percent.
- Set up the Django REST Framework backend with Celery handling async jobs like notifications and report generation. Designed the database schema around athlete data querying patterns.
- Implemented offline support using SQLite and Hive so the app works without internet, which mattered for some of our users in low connectivity areas.
- Wrote Pytest tests for the backend and Jest tests for the mobile layer. Kept test coverage as part of the regular development cycle, not just at release.
- Containerised the stack with Docker and wired up a GitHub Actions pipeline covering lint, test, build, and deploy to EC2.
- Used AWS S3 with presigned URLs for media uploads, EC2 for hosting the Django backend, and Lambda for post upload processing triggered by S3 events.
- Integrated the OpenAI API to build a content recommendation feature that went live in the app.
- Kept the codebase modular and well documented throughout, with consistent code review cycles every sprint.

Associate Software Engineer

Oct 2024 to Mar 2025

CleverPe, Pune (Fintech Startup)

- Worked on the merchant dashboard for a BNPL platform, building out transaction views, settlement records, and customer data screens using React.js and Tailwind CSS.
- Built a shared component library that the team reused across features, which meant new screens took noticeably less time to build.
- Fixed rendering performance issues in data heavy views by addressing unnecessary re renders and cleaning up state management.
- Worked in two week sprints with a product manager, a designer, and backend engineers, handling reviews and deployments as part of the regular cycle.

TECHNICAL SKILLS

Languages	Python, JavaScript (ES6+), TypeScript, Kotlin
Mobile	React Native, Android SDK, Jetpack Compose, Expo, App Store / Play Store
Backend	Django, Django REST Framework, Celery, Node.js, Express.js, REST API Design
Frontend	React.js, Next.js, Tailwind CSS, HTML5, CSS3
Databases	PostgreSQL, MongoDB, SQLite, Hive
DevOps	AWS (S3, EC2, Lambda), Docker, GitHub Actions, CI/CD, Git
Testing	Pytest, Jest, Integration Testing, Maestro
AI	OpenAI API, Prompt Engineering, LLM Integration
Tools	Sentry, Mixpanel, Smartlook, Cloudflare R2, Stream SDK, Postman
Concepts	System Design, SOLID Principles, SDLC, Agile/Scrum, Database Design

PROJECTS

Meditation App	<i>React Native, Reanimated, Skia, SQLite</i>
A cross platform meditation app with breathing exercises, session timers, and a streak system to track daily practice. The whole app runs offline since everything is stored locally using SQLite and Hive, so there is no dependency on a server at all. Spent a fair amount of time on the animation layer using Reanimated and Skia to get fluid 60fps transitions that hold up on mid range Android devices.	
Real Time Chat App	<i>Node.js, Socket.IO, React.js, MongoDB</i>
A full stack chat application where messages arrive in real time via WebSockets. Built the backend with Node.js and Express, with Socket.IO handling the socket layer and MongoDB storing chat history. The frontend is in React.js with state management tuned for high frequency updates. Added presence tracking, typing indicators, and pagination for chat history so it works at scale.	
News App	<i>Kotlin, MVVM, Room DB, Retrofit</i>
An Android news reader built in Kotlin following a clean MVVM pattern with ViewModel, LiveData, and a Repository layer. News data comes from a REST API via Retrofit, and articles can be bookmarked and stored locally with Room DB. Stuck to standard Android architecture patterns throughout and kept the UI in Material Design with smooth screen transitions.	

EDUCATION

B.Tech in Computer Science and Engineering	2021 to 2025
Deogiri Institute of Engineering and Management Studies (DIEMS), Chh. Sambhajinagar	CGPA: 8.37
<i>Dr. Babasaheb Ambedkar Technological University</i>	
Higher Secondary Certificate	2021
Maulana Azad College, Aurangabad, Maharashtra	91.3%

LEADERSHIP

Android Lead, Google Developer Student Clubs (GDSC), DIEMS	2023 to 2024
• Ran the Android track for a year, helping 100+ students get started with mobile development. • Organised hands on sessions covering Jetpack Compose, Kotlin, and Firebase integration.
